EDUCATION

University of Michigan

B.S.E. in Computer Science

Expected Graduation: May 2027

Ann Arbor, Michigan

Relevant Coursework: Data Structures and Algorithms, Computer Organization, Discrete Math, Web Systems, User Interface Development, Computer Networks, Distributed Systems

EXPERIENCE

Incoming Technology Summer Analyst

Accenture

June 2026 – August 2026

San Francisco, California

Software Engineer Intern

Ghadys LLC

May 2025 – August 2025

Northville, Michigan

- Designed and optimized 20+ RESTful APIs using Java Spring Boot and C#.NET Core, improving backend response time by 35 percent across high volume fintech and healthcare systems
- Authored 150+ automated unit and integration tests using JUnit, xUnit, and React Testing Library, increasing test coverage from 57% to 91% and reducing regression defects by 60%
- Automated CI/CD pipelines via GitHub Actions and Azure DevOps to reduce deployment time by 85%, eliminate nearly all manual steps, and enable consistent daily production pushes across multiple regional cloud environments

Outreach Director Intern

M1 Digital

March 2024 – December 2024

Detroit, Michigan

- Analyzed and cleaned datasets from 10+ digital marketing events using Excel and SQL, built interactive dashboards using Google Sheets and Excel pivot tables with charts and filters, and used insights to refine event targeting, timing, and content strategy.
- Collaborated with internal product and marketing teams to define and execute OKRs for digital equity initiatives, directly impacting 100+ participants and expanding access to tech education resources
- Designed scalable event registration and feedback workflows using Airtable + Zapier automations, reducing manual coordination time by 50% while enabling real-time attendance tracking and sentiment analysis

PROJECTS

Agent Execution Platform | *TypeScript, Node.js, PostgreSQL, Docker, Distributed Systems*

August 2025

- Architected and built a modular multi-layer platform enabling secure agent coordination, capability discovery, and sandboxed task execution across distributed systems using clean, extensible design principles
- Designed trust, execution, and incentive systems including public-key identity, reputation scoring, containerized sandbox execution, verification pipelines, and a credit-based ledger with abstraction layers for future integration with cloud, AI, and enterprise services

Multi-Tenant Document Processing Platform | *FastAPI, Redis, Docker, JWT, SQLAlchemy*

December 2025

- Designed and built a production focused distributed backend platform enforcing strict tenant isolation, secure authentication, and scalable document ingestion for multi user environments
- Implemented JWT based authentication, role based authorization, PostgreSQL schemas, and Redis backed caching workflows to support low latency data access, structured processing, and downstream analytics use cases

Lift Link | *React Native, TypeScript, Redux Toolkit, Supabase, PostgreSQL*

July 2025

- Developed a full stack mobile fitness application supporting real time workout logging, analytics, and a latency sensitive social feed using React Native and TypeScript with an emphasis on performance and user experience
- Integrated Supabase for authentication, real time data synchronization, relational storage, and role based access control across users, workouts, and social interactions

TECHNICAL SKILLS

Languages: Golang, Python, C++, Java, C, JavaScript, SQL, Bash, FastAPI, Swift

Backend & Systems: RESTful APIs, Authentication, Authorization, PostgreSQL, Redis, Distributed Systems, Data Engineering, Machine Learning Systems, Algorithms, Performance Aware Backend Development

Infrastructure & DevOps: CI/CD, GitHub Actions, Azure DevOps, Docker, Cloud Deployment (AWS, GCP, Azure), Kubernetes

Tools & Frameworks: Linux, Unit Testing, Agile/Scrum, Data Visualization (Matplotlib), Power BI, Tableau, Object Oriented Programming
